

Prediction with new data for intercept - Supplementary material

Random intercept variance

Random intercept variance: R-squared = 0.4

Random intercept variance: R-squared = 0.7

Calibration in the large

Estimates

Calibration in the large

Training data: 4

Calibration in the large

Training data: 8

Calibration in the large

Training data: 16

Calibration in the large

Training data: 32

Calibration in the large

Training data: 64

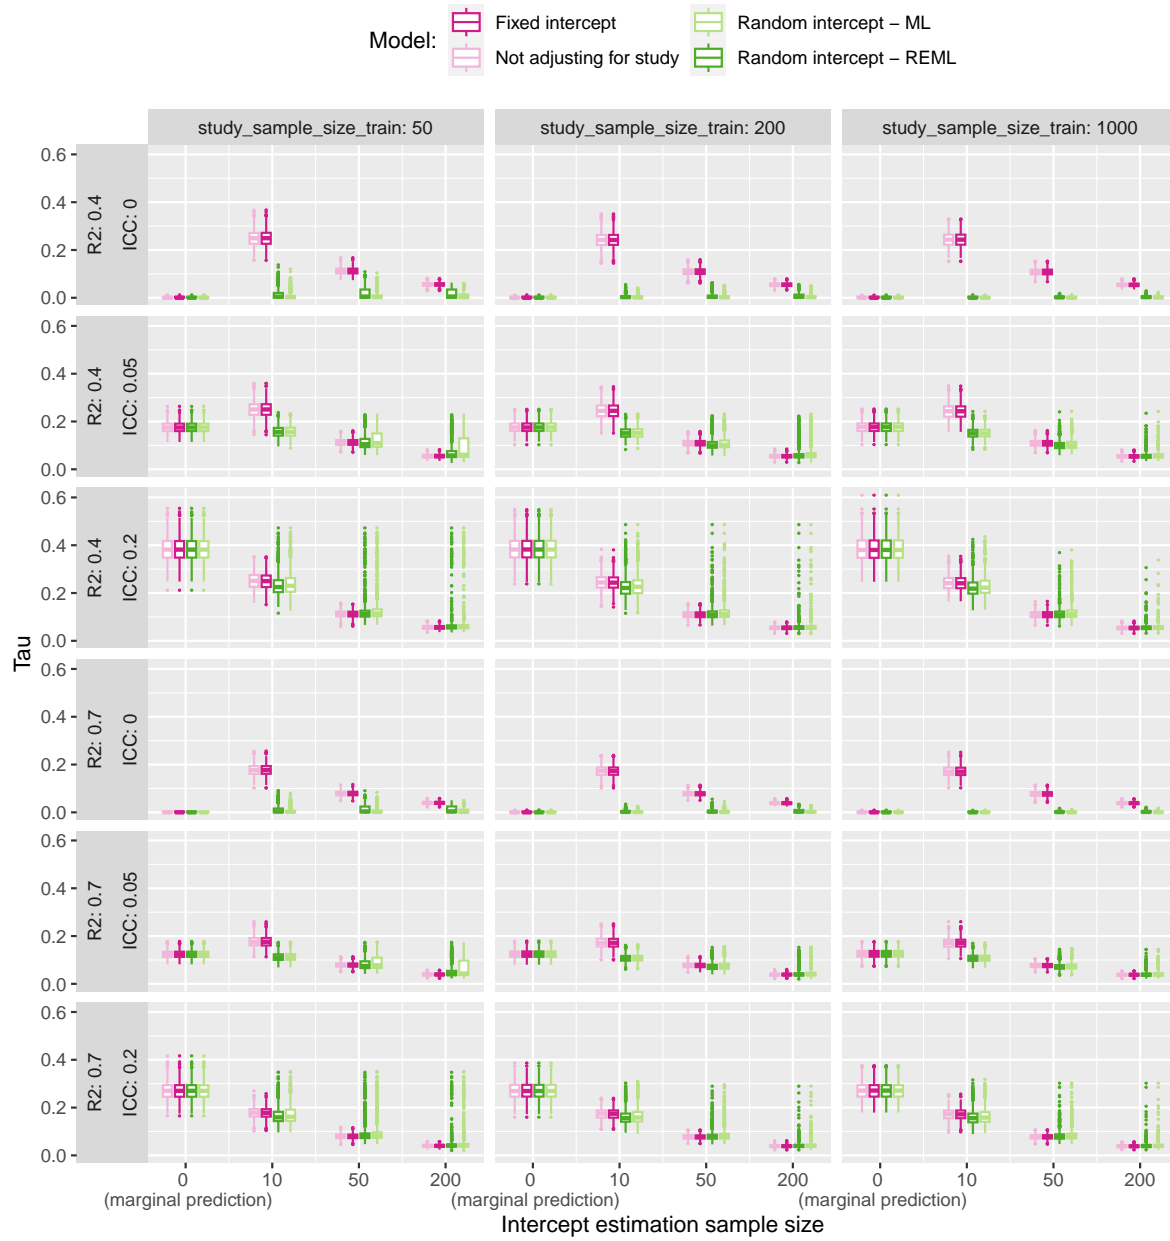

Model: □ Fixed intercept □ Random intercept – ML
□ Not adjusting for study □ Random intercept – REML

Heterogeneity

Heterogeneity in Calibration in the large

Training data: 4 studies

Hetrogeneity in Calibration in the large

Training data: 8 studies

Heterogeneity in Calibration in the large

Training data: 16 studies

Hetrogeneity in Calibration in the large

Training data: 32 studies

Heterogeneity in Calibration in the large

Training data: 64 studies
